## MacShield Enhanced Edition

### For Macintosh OS X.3 through X.4

MacShield Enhanced Edition is the next generation of hard drive configuration protection software specifically designed to protect Apple computers from harmful and erroneous changes to the system image and hard drive. A simple reboot restores the computer to the originally established pristine configuration.

MacShield Enhanced Edition takes the proven protection of the Foundation Series MacShield product even further. Like MacShield, MacShield Enhanced Edition is designed to clear Apple computers of unwanted changes such as downloads or deletions, system settings changes, and even installed programs. Upon reboot, all changes disappear, and the computer is restored to its original configuration. Now, exclusively in MacShield Enhanced Edition, should users need to permanently save information to a protected machine, a "Persistent Storage" space can be set up at install. In this space, documents, emails and other information can be saved, remaining unharmed and constant upon reboot.

MacShield Enhanced Edition operates as a buffer zone, allowing users to experiment without penalty or permanency. Changes are written to this buffer zone instead of the hard drive, so system files will never be modified. This provides the ultimate in safety, flexibility and unrestricted access. Additionally, although viruses are not a major concern on the Macintosh platform, users have an extra layer of certainty that no future malware will penetrate the system hard drive. MacShield Enhanced Edition protects the integrity of a systems configuration without fault.

### MacShield Enhanced Edition benefits:

#### Minimize computer maintenance:

- There is no longer a need to spend a great deal of time restoring systems that have been affected by changes, deletions and downloads.

#### Provide a consistent configuration:

- All system changes are eliminated upon reboot, unless saved to the Persistent Storage space, so the original configuration remains constant.

#### Unrestricted access:

- Stealth Mode provides undetectable protection, and eliminates attempts to bypass or negate security.
- Users are free to explore the entire system without permanently committing changes.

#### Easy installation and administration:

- Utilizes standard Apple Installer
- Can be deployed using Apple Remote Desktop.

#### Defined user(s) Home Folders are persistent:

- Defined User changes and data are retained and unaffected by reboot.
- Users not specifically defined have unrestricted system use, but all changes will be eliminated.

#### Includes an excellent maintenance package:

- Annual maintenance includes in-version updates, on-line knowledge base, unlimited toll-free and email technical support, as well as in-version patches and fixes.

---

#### Requirements:

CD-ROM Drive  
512 MB available HD space
